

BRANISLAV JENCO

Vallerveien 150E, 1346

Gjettum, Norway

+47 94 08 33 65

I enjoy tackling complexity, solving problems and helping others do the same.

Contact me at hi@br4.no.

WORK EXPERIENCE

4Subsea (Asker, Norway)

Senior Developer, Dec 2023–

Back-end development in .NET (C#/F#) and Python, front-end development with TypeScript (Angular). Working with Azure Kubernetes Service, Azure Service Fabric, OAuth2.

Sesam.io (Oslo, Norway)

Fullstack developer, then Tech lead, Mar 2018–Nov 2023

Back-end development with Python/C++ (Cython, Flask), Kubernetes, front-end development with JavaScript/TypeScript (React/Redux), mentoring and R&D, leading a team of developers.

Nornir (Oslo, Norway)

Fullstack developer, Aug 2017–Feb 2018

Web app development using AngularJS, VueJS on the front-end and Node.js (Express, Sails.js) on the back-end, OAuth2, SSO, WebRTC, API endpoint design. Creating interactive demos in the IoT space.

CERN (Geneva, Switzerland)

Summer Student Intern, Jun–Sep 2016

Developing a web application that queries CERN's CALS API, providing status overviews of measured variables and their timeseries visualizations. Java, JavaScript, HTML, CSS.

EDUCATION

Department of Informatics, University of Oslo (Oslo, Norway)

Programming and System Architecture (Msc.)

Sep 2019–Jun 2022

Faculty of Informatics, Masaryk University (Brno, Czechia)

Computer Graphics and Image Processing (Bsc.)

Sep 2014–Jun 2017

Faculty of Social Studies, Masaryk University (Brno, Czechia)

Media Studies – Digital Media (Msc.)

Sep 2014–Jun 2016

Media Studies and International Relations (Bsc.)

Sep 2011–Jun 2014

SKILLS SUMMARY

.NET (C#/F#), Python (Flask, FastAPI, Cython), Kubernetes, JavaScript (React, TypeScript), Terraform and other IaC tools, OAuth2

LANGUAGES

English (fluent), Norwegian (working proficiency), Slovak (native)

OTHER PROJECTS

Technical blog

<https://blog.br4.no>

Personal blog for technical topics. Writing about things I've learned, things I find interesting and mistakes I've made.

Desired State Systems

[Conference talk \(NDC Oslo 2021\)](#)

My most popular talk and blog post. Presenting and explaining a way of looking at systems and interfaces we work with through the lens of an abstraction called a desired state system. Comparing the API of tools like React, Kubernetes, Terraform in this context. Also presented at Shopify headquarters in Toronto.

Python struct format explainer

<https://pythonstruct.com>

Tiny open source project which allows users to get a quick explanation of the format strings used in Python's built-in struct module. { JavaScript }

Virtual LiDAR Error Models in Point Cloud Compression

[Master thesis \(IFI UiO\)](#)

Simulating a virtual LiDAR sensor to provide synthetic data generation for a geometry-based machine learning approach for compression of point clouds. Exploring deep learning approaches to 3D data and comparing existing compression algorithms. { Python (Pandas, numpy, scikit, PyTorch) , C++ }

Clustering Algorithms for Water Tracking in Proteins

[Bachelor thesis \(FI MUNI\)](#)

Comparing and implementing algorithms for clustering points in 3D space – Kernel K-Means, DBSCAN, Mean-Shift – in the context of protein structure analysis. { Java, Python – numpy/scikit }

Man-made Satellite Orbit Visualization

[PV251 Visualization Course](#)

Web-based visualization of satellite orbits. { WebGL, d3.js, HTML, CSS }

Immersive Virtual Reality Principles

[Master thesis \(FSS MUNI\)](#)

Developing a VR experience on the Oculus Rift with gesture controls using Leap Motion. { Unity Game Engine }

Web Design and New Technologies

[Bachelor thesis \(FSS MUNI\)](#)

WordPress theming and demonstration of web design principles on a website as part of the thesis. { JavaScript, HTML, CSS, WordPress }

INTERESTS

Spending time with my wife and daughter, hiking, bouldering, playing guitar.

Get in touch!
